Flood Precast - Reference

Dear Sir / Madam,

Flood Precast were employed by Balfour Beatty as a sub contractor on the Northwick Hospital project.

The project required for an area of concrete flooring with an exposed soffit that would take the weight of vehicles & tie into the steel work.

The original design was for an Omnia type deck but this had been changed to an in-situ slab. However Flood Precast came up with a sound technical solution using their Super Wide Slab which not only saved us money but also time on programme and gave a better finish.

The engineering design, drawings and manufacture were all completed on a very tight time schedule which the Christmas break wasn't allowed to impact on.

The site visits, Lift plan & RAMs were all completed in a timely, professional & safe manner. The installation went according to plan & there were no hidden or additional costs incurred.

We would have no hesitation in recommending or working with Flood Precast again.

Yours faithfully,

Matt Oakley
Project Commercial Lead
